1. PICOs

PICO 1. Should we use NSAIDs over colchicine/corticosteroids in patients experiencing a gout flare to reduce the duration of the flare?

Patients	Patient experiencing a gout flare
Intervention	Using NSAID
Comparator	Using Colchicine/steroid
Outcome	Duration of the flare

PICO 2 Should clinicians initiate ULT during gout flares vs. after gout flares have resolved?

Patients	Patient experiencing a gout flare who did not receive ULT before
Intervention	Start ULT during a gout flare with a concomitant anti-inflammatory drug
Comparator	Use anti-inflammatory drug only
Outcome	Gout flares (duration, pain severity)

PICO 3. Prophylaxis vs. no prophylaxis in patients with gout starting ULT

Patients	Gout patients initiating ULT
Intervention	Use prophylactic anti-inflammatory drugs
Comparator	Initiate ULT without prophylactic anti-inflammatory drugs
Outcome	Gout flares

PICO 4. Should ULT be prescribed to achieve serum urate <6mg/dL in gout in order to prevent gout flares and bone erosion?

Patients	Gout patients
Intervention	prescribing ULT to achieve serum urate <6mg/dL
Comparator	serum urate ≥6mg/dL
Outcome	Gout flares, bone erosion

PICO 5. Should ULT be stopped vs. continued for patients with gout on ULT?

Patients	Gout patients
Intervention	Stopping ULT
Comparator	Continuing ULT
Outcome	Gout flares

PICO 6. Should xanthine oxidase inhibitors be prescribed over uricosuric agents in chronic tophaceous gout?

Patients	Patients with tophaceous gout
Intervention	Prescription of xanthine oxidase inhibitor
Comparator	Prescription of uricosuric agent
Outcome	Tophi size, bone erosion

PICO 7. Should ULT be used in gout patients vs. no treatment in order to preserve renal function?

Patients	Patients with gout
Intervention	Using ULT (allopurinol, febuxostat, benzbromarone, pegloticase)
Comparator	Not using ULT (allopurinol, febuxostat, benzbromarone, pegloticase)
Outcome	Benefit – renoprotective effect Harm – adverse events of ULT Patients' value and preference

PICO 8. Should prescribing ULT be used to improve cardiovascular outcomes in patients with gout vs. no treatment?

Patients	Patients with gout
Intervention	Prescribing ULT
Comparator	No treatment
Outcome	Cardiovascular outcomes

PICO 9. Should prescribing ULT vs. no treatment be used in CKD 3,4 patients with asymptomatic hyperuricemia in order to protect renal function?

Patients	Asymptomatic hyperuricemia patients with CKD stage 3,4
Intervention	Prescribing ULT
Comparator	Not prescribing ULT
Outcome	Renoprotective effect

Dyslipidemia	220 (27.2)	192 (28.5)	16 (19.5)	0.084	
Cardiovascular disease*	96 (11.9)	85 (12.6)	6 (7.3)	0.163	
Cerebrovascular disease	21 (2.6)	17 (2.5)	1 (1.2)	0.710	
Renal dysfunction	87 (10.8)	75 (11.1)	7 (8.5)	0.474	
Gout attacks in the past year					
None	342 (42.3)	311 (46.2)	20 (24.4)	<0.001	
1-3	359 (44.4)	271 (40.3)	51 (62.2)		
≥4	108 (13.3)	91 (13.5)	11 (13.4)		
Current use of ULT	755 (94.5)	-	-	-	
Allopurinol	138 (18.3)	126 (18.7)	12 (14.6)	0.366	

Febuxostat	313 (41.5)	283 (42.1)	30 (36.6)	0.343
Benzbromarone	15 (2.0)	15 (2.2)	0 (0)	0.392
Do not know	258 (34.2)	223 (33.1)	35 (42.7)	0.108
Use of alternative treatments	131 (16.4)	112 (16.8)	13 (16.5)	0.940
Natural supplements	117 (14.7)	101 (15.2)	12 (15.4)	0.968
Herbal remedies	15 (1.9)	13 (2.0)	0 (0)	0.381

Data are presented as number (%). ULT, urate lowering therapy; SD, standard deviation; BMD, body mass index

*includes ischemic heart disease, myocardial infarction, arrhythmia, congestive heart failure

Table 2. Patients' perspectives and preferences for gout management

Total (N=809)	Patients taking ULT (n=755)			P	
	ULT adherence≥80% (n=673)	ULT adherence<80% (n=82)			
Know management strategies					
Know well	299 (37.0)	258 (38.3)	23 (28.0)	0.063	
Know a little	467 (57.8)	387 (57.5)	52 (63.4)		
Do not know	42 (5.2)	28 (4.2)	7 (8.5)		
Perceive gout as a lifelong disease					
Strongly agree	344 (42.5)	297 (44.1)	28 (34.1)	0.322	
Agree	394 (48.7)	315 (46.8)	45 (54.9)		
Disagree	16 (2.0)	15 (2.2)	1 (1.2)		
Strongly disagree	27 (3.3)	24 (3.6)	3 (3.7)		
Do not know	28 (3.5)	22 (3.3)	5 (6.1)		

Efforts toward making lifestyle modifications				
Any*	722 (89.2)	606 (90.0)	69 (84.1)	0.101
Regular exercise	449 (55.6)	380 (56.5)	40 (48.8)	0.181
Dietary modification	417 (51.6)	362 (53.8)	34 (41.5)	0.035
Alcohol restriction	614 (75.9)	522 (22.4)	25 (30.5)	0.104
Education preferences about gout management				
During clinic visit	582 (71.9)	492 (73.1)	57 (69.5)	0.490
Health education program	15 (1.9)	13 (1.9)	0 (0)	0.381
TV and radio programs	83 (10.3)	70 (10.4)	6 (7.3)	0.381
Written information (books, magazines, pamphlets)	33 (4.5)	30 (43)	1 (1.2)	0.239
Internet searching	283 (35.0)	229 (34.0)	36 (43.9)	0.077
Friends/family members with gout	58 (7.2)	50 (7.4)	5 (6.1)	0.661
Never sought	28 (3.5)	21 (3.1)	1 (1.2)	0.498
Treatment preferences				
ULT only	230 (28.4)	204 (30.3)	13 (15.9)	0.006
Lifestyle modification only	141 (17.4)	104 (15.5)	23 (28.0)	0.004
ULT and lifestyle modification	434 (53.6)	362 (53.8)	45 (54.9)	0.852
Others†	8 (1.0)	6 (0.9)	2 (2.4)	0.212

Data are presented as number (%). ULT, urate lowering therapy.

* Practicing at least one of regular exercise, dietary modification, and alcohol restriction.

† Others include natural supplements, herbal remedies, stress management, and joint injection.

Table 3. Factors affecting adherence to urate lowering therapy

	Univariable			Multivariable		
	OR	95% CI	P	OR	95% CI	P
Age	1.01	1.001-1.047	0.002	1.03	1.011-1.048	0.002
Disease duration	1.05	1.010-1.089	0.013	-	-	-
Having hypertension	1.52	0.947-2.428	0.083	-	-	-
Acknowledgement of management strategies	2.80	1.105-7.119	0.030	3.56	1.335-9.510	0.011
Practicing dietary modification	1.64	1.032-2.615	0.036	1.50	0.928-2.414	0.098
Preference for taking ULT for treatment	2.17	1.289-3.635	0.003	2.07	1.214-3.516	0.007

OR, odd ratio; CI, confidence interval; ULT, urate lowering therapy

4. Review and approval

1) Review – clinical practice guideline committee of Korean College of Rheumatology

Recommendations (10-7-2021)

	<u>Details</u>	
Review	<u>Overall score</u>	<u>81.5%</u>
	<u>Comments</u>	<u>The guidelines were appropriately developed following a sound methodology of evidence-based medicine with participation of the various stakeholders who treat Korean gout patients. The guidelines will be helpful to clinicians, medical students and policymakers. We expect continuous updates of the guidelines incorporating domestic evidences with a proper plan and consensus for the revision.</u>
<u>Decision</u>	<u>Revision</u>	

Recommendations (11-02-2021)

- 1) Revise the recommendation 6 and 8, and change the strength of recommendation accordingly. ('No recommendation' might not be proper).
- 2) It is not clear what recommendation 6 is suggesting.
- 3) Resubmit for review after revision

Recommendations (5-12-2022)

Approved

5. Conflict of interests (appendix)

6. Searching terms and strategies

7. Literature selection

8. Evidence table

KQ1

Should we use NSAIDs over colchicine/corticosteroids in patients experiencing a gout flare to reduce the duration of the flare?

1) Characteristics of selected studies (Evidence table)

Study	Design	Characteristics	Intervention	Control	Outcome
Billy 2017	Systematic Review	Acute gout patients	NSAIDs	Steroid	Pain, Acute gout duration
Roddy2019	RCT	Acute gout patients	NSAIDs	Colchicine	Pain, Acute gout duration

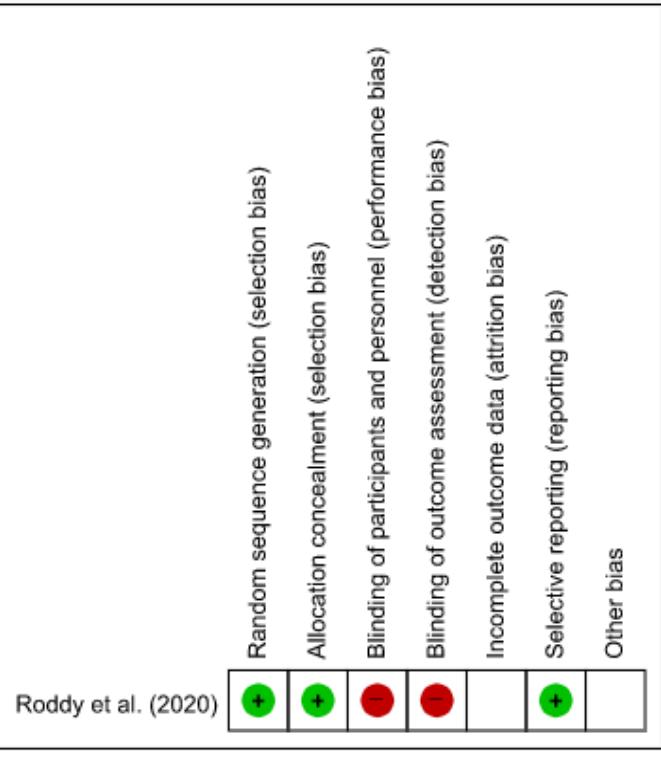

2) Assessment of risk of bias

Billy (Amstar: 8)

Questions	Assessment			
	Yes	No	Can't answer	Not applicable
1. Was an 'a priori' design provided?			o	
2. Was there duplicate study selection and data extraction?	o			
3. Was a comprehensive literature search performed?	o			

4. Was the status of publication (i.e. grey literature) used as an inclusion criterion?	o			
5. Was a list of studies (included and excluded) provided?		o		
6. Were the characteristics of the included studies provided?	o			
7. Was the scientific quality of the included studies assessed and documented?	o			
8. Was the scientific quality of the included studies used appropriately in formulating conclusions?	o			
9. Were the methods used to combine the findings of studies appropriate?	o			
10. Was the likelihood of publication bias assessed?	o			
11. Was the conflict of interest stated?		o		

Roddy

3) GRADE evidence profile

Certainty assessment							Nº of patients		Effect		Certainty	Importance
Nº of studies	Study design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	NSAIDs	steroid	Relative (95% CI)	Absolute (95% CI)		

Pain

2	randomised trials	not serious	not serious	serious	not serious	none	267	267	-	SMD 0.09 SD lower (0.26 lower to 0.08 higher)	⊕⊕⊕○ MODERATE	IMPORTANT
---	-------------------	-------------	-------------	---------	-------------	------	-----	-----	---	---	------------------	-----------

Duration of flare

1	randomised trials	serious	not serious	not serious	serious	none	-/10	-/10	not estimable		⊕⊕○○ LOW	critical
---	-------------------	---------	-------------	-------------	---------	------	------	------	---------------	--	-------------	----------

CI: Confidence interval; SMD: Standardised mean difference

Explanations

- a. short-term pain (7 days)
- b. Time to disease resolution

Certainty assessment				Nº of patients	Effect	Certainty	Importance
----------------------	--	--	--	----------------	--------	-----------	------------

No of studies	Study design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	NSAID	colchicine	Relative (95% CI)	Absolute (95% CI)		
---------------	--------------	--------------	---------------	--------------	-------------	----------------------	-------	------------	-------------------	-------------------	--	--

Pain^a

1	randomised trials	serious ^b	not serious	not serious	not serious	none	200	199	-	not estimable	⊕⊕⊕○ MODERATE	IMPORTANT
---	-------------------	----------------------	-------------	-------------	-------------	------	-----	-----	---	---------------	------------------	-----------

Duration (follow up: median 28 days)^c

1	randomised trials	serious ^b	not serious	not serious	not serious	none	200	199	-	median 1 days lower (0 to 0)	⊕⊕⊕○ MODERATE	CRITICAL
---	-------------------	----------------------	-------------	-------------	-------------	------	-----	-----	---	----------------------------------	------------------	----------

CI: Confidence interval

Explanations

a. mean change in worst pain intensity over days 1–7

b. This is an open label study without blinded outcome assessment or placebo tablets, and collection of solely self-reported outcomes.

c. Days to complete pain resolution

KQ2	<i>Should we start ULT during a gout flare vs. after a gout flare has resolved when initiating ULT?</i>
------------	---

1) Characteristics of selected studies (Evidence table)

Study	Design	Characteristics	Intervention	Control	Outcome
Fatma 2016	Systematic Review	Initiation of any ULT in patients with acute gout	Allopurinol	Placebo	Gout attack :Pain severity and Duration of gout attack

2) Assessment of risk of bias

AMSTAR: 8

Questions	Assessment			
	Yes	No	Can't answer	Not applicable
1. Was an 'a priori' design provided?			o	
2. Was there duplicate study selection and data extraction?	o			
3. Was a comprehensive literature search performed?	o			
4. Was the status of publication (i.e. grey literature) used as an inclusion criterion?	o			
5. Was a list of studies (included and excluded) provided?		o		
6. Were the characteristics of the included studies provided?	o			
7. Was the scientific quality of the included studies assessed and documented?	o			
8. Was the scientific quality of the included studies used appropriately in formulating conclusions?	o			
9. Were the methods used to combine the findings of studies appropriate?	o			

10. Was the likelihood of publication bias assessed?	o			
11. Was the conflict of interest stated?		o		

3) GRADE evidence profile

Certainty assessment							Nº of patients		Effect		Certainty	Importance
Nº of studies	Study design	Risk of bias	Inconsistency	Indirectness	Imprecision	Other considerations	With ULT be used during a gout flare	With after a gout flare has resolved	Relative (95% CI)	Absolute (95% CI)		

Gout flares

2	randomized trials	not serious	not serious	not serious	very serious a,b	none	5/53 (9.4%)	8/49 (16.3%)	not estimable		⊕⊕○○ LOW	
---	-------------------	-------------	-------------	-------------	---------------------	------	-------------	--------------	---------------	--	-------------	--
