### Breast MRI Acquisition Protocol

1. MR equipment unit should be at 1.5 T or higher.
2. Dedicated breast coil should be applied.
3. Cases should be scanned with prone position.
4. T2-weighted image should be included.
5. At least more than 2 phases of dynamic contrast T1-weighted images should be included.
6. Pre-contrast T1-weighted image should be included.
7. Early phase (1st) post-contrast T1-weighted images should be obtained between 60–120 seconds.
8. Delayed phase (last) post-contrast T1-weighted images should be obtained after 4 minutes.
9. Subtraction images should be included.
   - Detailed protocol for Dynamic contrast images (No. 10-No. 13)
10. Slice thickness ≤ 3.0 mm
11. Spatial in-plane pixel resolution ≤ 1.5 mm² (preferably ≤ 1 mm²)
12. Temporal resolution ≤ 120 sec
13. No gap
14. MIP (maximum intensity projection) should be included.
