</tbody>
</table>

**Note.**— SNR was calculated according to equation: \( \text{SNR} = 1.253 \times \text{signal intensity on b0 images} / \text{signal intensity on corresponding noise image} \). *Isotropic diffusion images were used to measure SNR according to b-value change. NDGD = number of diffusion gradient directions, NSA = number of signals acquired, SENSE = sensitivity encoding, SNR = signal-to-noise ratio, TE = echo time
