Supplementary Fig. 1. ROIs for each organ in 11-year-old male patient.
A. Four ROIs were positioned in four sections (anterior and posterior in right lobe; medial and lateral in left lobe) of liver. B. Three ROIs were drawn in head, body, and tail of pancreas. C. Two ROIs were located in anterior and posterior parts of spleen. D. Two ROIs were placed at bilateral psoas muscles at iliac crest level, avoiding macroscopic fat infiltration. ROIs = regions of interest
