Retraction: Efficient Induction of Dopaminergic Neurons from Embryonic Stem Cells for Application to Parkinson's Disease

Dong-Wook Kim

Department of Physiology, Yonsei University College of Medicine, Seoul, Korea.

To the Editor

My review paper on the efficient induction of dopaminergic neurons from embryonic stem cells has been made based on speakers' presentation materials at the 2004 Biomedical Symposium at Yonsei University. Since this paper contained some unpublished data which constitute a part of my paper that is still in revision for publication in a journal, I hereby retract the paper.
