To the Editor,

We would like to report the following errata in Table 4, and request that these items be revised appropriately.

- In Table 4B (p. 198), under "CAP, Positive", the value "67" should be "37". As a result, the total beneath that entry should be revised from "63" to "57" ($20 + 37 = 57$).
- In the same table, under "CAP, Negative" the value "78" should instead be "84" ($50 + 34 = 84$).

Please find attached a revised version of the table.

B. CAP

		CAP		Total
		Positive	Negative	
Systemic reaction	Yes	20	50	70
	No	37	34	71
		57	84	141
Sensitivity		28.5%		
Specificity		47.9%		
Agreement		38.3%		

Please note that these revisions have no effect on the results, content, discussion, or conclusions of this paper. We apologize for any inconvenience caused, and we thank you for your kind consideration of this request.

Sincerely,

Hirokuni Hirata
