- Abstract -

Analysis of the Nursing Curricula in Graduate Programs in Korea*

Park, Eun-Sook¹⁾ · Yang, Soon-Ok²⁾

Kim, So-Sun³⁾ · Yang, Soo⁴⁾

Park, Young-Joo¹⁾ · Ha, Na-Sun⁵⁾

Kim, Kyung-Hee⁶⁾

This study was designed to analyze the

nursing curricula in graduate programs and suggest the direction of future nursing curricula. Thirty-two nursing curricula for a master's degree and fifteen curricula for a doctoral degree from general graduate programs, fifteen nursing curricula for a master's degree from fifteen educational graduate programs, eight nursing curricula for master degree from eight out of twelve public health graduate programs, three nursing curricula for a master's degree from three administrative graduate programs, and four nursing curricula for a master's degree from four clinical nursing graduate programs, were analyzed. Consequently, It was hard to find a clear difference between the educational goals and objectives, the subjects open in nursing curricula for a master's degree and those for a doctoral degree of graduate programs. The educational graduate programs, public health graduate programs, administrative graduate programs, and clinical nursing graduate programs, each program showed little different in each educational goal and objective. However, because the various kinds of subjects open in each program were not based on the core curricula, the quality of the nursing curricula need to be evaluated and develop the curricula to difference are the goal and objective. Accordingly, future studies need to be focused on developing core nursing curricula reflecting the characteristics of each graduate program.

Key words : Graduate Program, Nursing Curriculum

* This study was the excerpt of the report performed by the Educational Committee, a branch of Korean Academy of Nursing.
