= Abstract =

Surgical Treatment for Unstable Intra-articular Fracture of the Distal Radius with Rayhack 's Transulnar Percutaneous Pinning Technique

Eui-Chan Jang, M.D., Ho-Sung Ryu, M.D., Jae-Sung Lee, M.D., Jung-Nam Han, M.D.

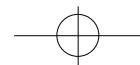

*Dept. of Orthopedic Surgery, College of Medicine,
Chung-Ang University, Seoul, Korea*

There has been many treatment modalities in the distal radius fracture. Although there is no doubt that external fixators have a role in the treatment of some highly displaced distal radius fractures, many unstable distal radius fractures may be treated adequately with far less complicated and intrusive percutaneous pinning technique.

The purpose of this study was to evaluate indication and effectiveness of Rayhack 's transulnar percutaneous pinning technique. Authors reviewed the unstable intra-articular fracture of the distal radius of 15 cases treated with Rayhack 's transulnar percutaneous pinning technique between March 1994 and February 1997. At the final follow-up examination, the mean loss of radial length, radial inclination and volar tilt was respectively 0.4mm (3.9%), 2.0 (10.6%), 2.1 (14.7%). Posttraumatic arthritis was occurred in 1 case (11.1%) of less than 1mm residual articular step-off, 2 cases (40%) of more than 1mm and less than 3mm residual articular step-off, 1 case (100%) of more than 3mm residual articular step-off. Distal radioulnar joint synostosis by percutaneous pinning was not found. According to Demerit point rating system,

: 37-65-207 (140-013)

Tel : 748 - 9564 Fax : 793-6634

excellent to good results were obtained in 73.3%.

Authors suggest that Rayhack's pinning technique can be applied in terms of simple procedure, cost-effectiveness and functional outcome.

Key Words : Distal radius, Unstable intra-articular fracture, Rayhack's transulnar percutaneous pinning

	Points
Residual deformity (range, 0 to 3 points)	
Prominent ulnar styloid	1
Residual dorsal tilt	2
Radial deviation of hand	2 or 3
Subjective evaluation (range, 0 to 6 points)	
Excellent-no pain, disability, or limitation of motion	0
Good-occasional pain, slight limitation of motion, and no disability	2
Fair-occasional pain, some limitation of motion, feeling of weakness in wrist no particular disability if careful, and activities slightly restricted	4
Poor-pain, limitation of motion, disability, and activities more or less markedly restricted	6
Objective evaluation (range, 0 to 5 points)	
Dorsiflexion < 45°	5
Ulnar deviation < 30°	3
Supination < 50°	2
Pronation < 50°	2
Palmar flexion < 30°	1
Radial deviation < 15°	1
Loss of circumduction	1
Pain in distal radio-ulnar joint	1
Grip strength < 60% of uninjured side	1
Complications (range, 0 to 5 points)	
Arthritic change	
Minimum	1
Minimum with pain	3
Moderate	2
Moderate with pain	4
Severe	3
Severe with pain	5
Nerve complications (median)	1 to 3
Poor finger function due to cast	1 to 2
Final results (range of points)	
Excellent	0 to 2
Good	3 to 8
Fair	9 to 20
Poor	21
