J Periodontal Implant Sci 2010;40:105-10. doi: 10.5051/jpis.2010.40.3.105

Some parts of the published Legend of Fig. 4 should be corrected as follows.

Corrected Legend of Fig. 4

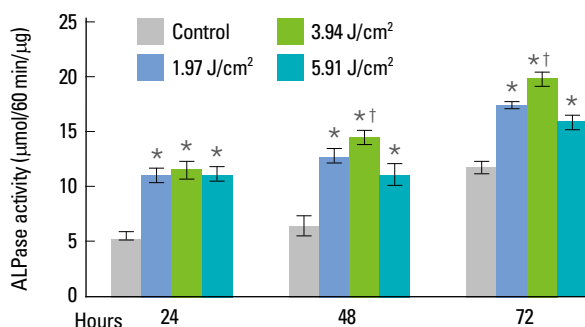

Figure 4. Effect of semiconductor diode laser irradiation on alkaline phosphatase (ALPase) activity in human periodontal ligament fibroblasts (PDLFs). All the laser-irradiated groups showed a significant increase compared to the control. ALPase activity of PDLFs was significantly greater at 3.94 J/cm² of laser energy fluency compared to the others.

*Statistically significant from the control ($P < 0.05$).

†Statistically significant from the other laser-irradiated groups ($P < 0.05$).
