

**Supplementary Fig. 1.** Changes of peak airway pressure (A) and lung compliance (B) between the I-gel group and Baska Mask group. Values are expressed as mean  $\pm$  standard deviation. There were no significant differences in peak airway pressure and lung compliance between the groups. T1: 1 min after induction, T2: 5 min before CO<sub>2</sub> pneumoperitoneum, T3: 5 min after start of CO<sub>2</sub> pneumoperitoneum, T4: 5 min before removal of pneumoperitoneum, T5: 5 min after removal of pneumoperitoneum.
