

Supplementary Fig. 2. Forest plot for sensitivity analysis of the incidence of bradycardia in the comparison between remimazolam and volatile groups. Sensitivity analysis identified no alteration of effect size. “-H” refers to the group that received 0.3 $\mu\text{g/kg/min}$ of remifentanyl; “-L” refers to the group that received 0.05 $\mu\text{g/kg/min}$ of remifentanyl; CI, confidence interval.
