S1 Fig. Effects of everolimus and crizotinib combination on SU-DHL-1 murine xenografts. SU-DHL-1 cells were inoculated subcutaneously into mice (n=2 per group). Daily treatment of control, everolimus, crizotinib or combination of both was started when tumors reached 40 mm³. (A) Tumor volume was monitored weekly from the start of treatment. (B) Body weight after drug administration was monitored weekly.
