

S3 Table. Overall response rate by *EGFR* mutation status after chemoradiotherapy

Response	Mutant type (n=12)	Wild type (n=28)	Unknown (n=19)	p-value
CR	0	1	0	
PR	9	20	10	
SD	1 ^{a)}	5	6	
PD	2 ^{b)}	0	1	
NE	0	2	2	
ORR (CR+PR)	9/12 (75.0%)	21/26 (80.8%)	10/17 (58.8%)	0.229

EGFR, epidermal growth factor receptor; CR, complete response; PR, partial response; SD, stable disease; PD, disease progression; NE, not evaluable; ORR, overall response rate.

^{a)}Exon 20 insertion, ^{b)}Exon 19 deletion (n=1) and exon 20 insertion (n=1).
