

**S1 Fig.** Cytotoxicity assay. The cytotoxicity against CT-26 cells was significantly higher in the group treated with DCs and irradiation, followed by the positive control group using tumor cell lysates. 0-hour incubation vs. other groups (\* $p < 0.05$ , \*\*\* $p < 0.001$ ), 24-hour incubation vs. 48 or 72-hour incubation (### $p < 0.001$ ), 48-hour incubation vs. 72-hour incubation (†† $p < 0.01$ ).
