

S10 Fig. Kaplan-Meier analysis of R0-resected head and neck squamous cell carcinomas considering panTrk expression. In hypopharyngeal, laryngeal, and oropharyngeal SCCs, there was no significant correlation with expression of panTrk in overall survival (A, B, and C, respectively) and recurrence-free survival (D, E, and F, respectively) in Kaplan-Meier analysis. SCC, squamous cell carcinoma; OS, overall survival; RFS, recurrence-free survival.
