

S9 Fig. Kaplan-Meier analysis of R0-resected non-oro-pharyngeal head and neck squamous cell carcinomas associated with TrkA expression. Other non-oro-pharyngeal SCCs, including hypopharyngeal, laryngeal, and oral cavity SCCs showed no significant correlation with expression of TrkA in OS (A, B, and C, respectively) and RFS (D, E, and F, respectively) in Kaplan-Meier analysis. SCC, squamous cell carcinoma; OS, overall survival; RFS, recurrence-free survival.
