

**S6 Fig.** Progression-free survival (PFS) and overall survival (OS) of all advanced angiosarcoma patients. (A, B) Survival curves show PFS and OS, respectively, of all patients according to the chemotherapy regimens. Black lines represent the survival of all patients. Blue dashed lines represent patients who received first-line weekly paclitaxel and red dashed lines represent patients who received other regimens. Median PFS of weekly paclitaxel group and other regimen group was 4.0 months (95% confidence interval [CI], 3.0 to 6.1 months) and 3.5 months (95% CI, 2.0 to 7.2 months;  $p=0.13$ ), respectively. Median OS of weekly paclitaxel group and other regimen group was 10.2 months (95% CI, 7.0 to 14.6 months) and 10.2 months (95% CI, 7.0 to 16.8;  $p=0.31$ ), respectively. Censored data are marked with cross segments and numbers at risk are demonstrated on the table at the bottom of each plot.
