S9 Fig. Kaplan-Meier survival curves of locally advanced or metastatic pancreatic cancer patients in validation set based on fibrinogen-to-albumin ratio (FAR), monocyte-to-lymphocyte ratio (MLR), neutrophil-to-lymphocyte ratio (NLR), and platelet-to-lymphocyte ratio (PLR). (A) Data in validation set compares FAR ≤ 0.079 vs. > 0.079 (p < 0.001). (B) Data in validation set compares MLR ≤ 0.36 vs. > 0.36 (p < 0.05). (C) Data in validation set compares NLR ≤ 2.61 vs. > 2.61 (p < 0.05). (D) Data in validation set compares PLR ≤ 170.73 vs. > 170.73 (p < 0.05).
