

**S6 Table.** Univariable logistic regression of risk factors related to the use of cytotoxic agents for drug-induced pneumonitis in patients who received systemic chemotherapy within 8 weeks prior to the administration of ICI

Risk factor	Pneumonitis, n (%)	Univariable analysis		
		OR	95% CI	p-value
<b>Regimen</b>				
Platinum-based	7/74 (9.5)			
Taxane-based	0/21 (0)	NA	NA	NA
Others	3/28 (10.7)	1.149	0.275-4.792	0.849
<b>Dose intensity</b>				
Standard dose	8/104 (7.7)			
Reduced dose <sup>a)</sup>	2/19 (10.5)	1.412	0.276-7.228	0.679
<b>Interval to ICI (day)</b>				
< 28	2/61 (3.3)			
≥ 28	8/62 (12.9)	4.370	0.889-21.492	0.070

CI, confidence interval; ICI, immune-checkpoint inhibitor; NA, not available; OR, odds ratio. <sup>a)</sup>Defined as below 90% of standard dose.
