

S1 Table. Hazard ratios and 95% confidence intervals for the incidence of pancreatic cancer according to the four groups divided by the frequency of vigorous physical activity in subjects excluding cases developing pancreatic cancer within 6 months from the date of cohort participation (n=220,335)

Physical activity	Person-year	Incidence cases	Incidence density	Hazard ratios (95% confidence interval)	
				Unadjusted	Adjusted model
Group 1	566,483.5	228	4.0	1.00 (reference)	1.00 (reference)
Group 2	291,640.2	101	3.5	0.86 (0.68-1.09)	1.12 (0.87-1.44)
Group 3	61,965.9	16	2.6	0.64 (0.39-1.07)	0.81 (0.49-1.35)
Group 4	45,733.7	10	2.2	0.54 (0.29-0.84)	0.51 (0.37-0.96)
p for trend				0.029	0.009
