

S2 Table. Pathologic diagnosis of focal lesions with targetoid appearance on ECA-MRI and HBA-MRI.

Targetoid appearance	ECA-MRI (n=14)	HBA-MRI (n=13)
HCC	12 (85.8)	11 (84.6)
cHCC-CCA	1 (7.1)	1 (7.7)
Intrahepatic cholangiocarcinoma	1 (7.1)	1 (7.7)

Values are presented as number (%). cHCC-CCA, combined hepatocellular-cholangiocarcinoma; ECA-MRI, magnetic resonance imaging with an extracellular agent; HBA-MRI, magnetic resonance imaging with a hepatobiliary agent; HCC, hepatocellular carcinoma.
