

S4 Fig. The cancer cell lines (H1650 and H1975) were used for templates to amplify epidermal growth factor receptor (*EGFR*) in each exon by with and without blockers in the polymerase chain reaction. All amplicons were tagged with the barcode and investigated by gel electrophoresis. The red pointer representing amplicon products were 240 bp, 248 bp, and 241 bp of exon 19, 20, and 21, respectively. BDA, blocker displacement amplification.
