

S2 Fig. Pre- and post-neoadjuvant concurrent chemoradiation therapy (CCRT) changes in programmed cell death ligand 1 (PD-L1) tumor proportion score (TPS). (A) Pre-CCRT TPS and post-CCRT TPS for paired samples (n=17, points connected with solid lines) and pre-CCRT TPS for a pathologic complete responder (n=1). Points are jittered horizontally to avoid overlap. Colors indicate the direction of change in PD-L1 TPS. (B) Frequency of PD-L1 TPS categories at each timepoint for the 18 patients included in panel A.
