Wald's test for all P values, except when frequencies were smaller than five in each case, Fisher's exact test was used. Economic class "Gross average family income in the month in R \$ per class": A-B = > 3,118, C = 896 to 3,117, D-E = ≤ 895.

PR: prevalence ratio, CI: confidence interval, NSAIDs: non-steroidal anti-inflammatory drugs, HDL: high-density lipoprotein, LDL: low-density lipoprotein.

*Others include: student, rural worker, unemployed, leaning, pensioner, beneficiary of illness aid.

*Significant association (P < 0.05).

Wald's test for all P values, except when frequencies were smaller than five in each case, Fisher's exact test was used. Economic class "Gross average family income in the month in R \$ per class": A-B = > 3,118, C = 896 to 3,117, D-E = ≤ 895.

PR: prevalence ratio, CI: confidence interval, NSAIDs: non-steroidal anti-inflammatory drugs, HDL: high-density lipoprotein, LDL: low-density lipoprotein.

*Others include: student, rural worker, unemployed, leaning, pensioner, beneficiary of illness aid.

*Significant association ($P < 0.05$).
