

Supplementary Fig. 1. Comparison of the score ratio (0 to 1, test score/score scale) between the YSK olfactory function (YOF) test and the Korean version of Sniffin' stick test (KVSS-II) for the normosmia group. There were significant differences in the mean value of score ratios of the total TDI score ($P < 0.001$), threshold test ($P < 0.001$), and identification test ($P < 0.001$), except for the discrimination test ($P = 0.820$) between the YOF test and the KVSS-II. T, threshold; D, discrimination; I, identification. *** $P < 0.001$.
