

See “High mucosal cytomegalovirus DNA helps predict adverse short-term outcome in acute severe ulcerative colitis” on page 1-10.

Supplementary Table 1. Multivariable Analysis for Prediction of Colectomy during Index Admission in Acute Severe Ulcerative Colitis

| Variable | OR (95% CI) | P-value |
|--|------------------|---------|
| Quantitative CMV DNA > 2,000 copies/mg | 17.2 (2.6–115.2) | < 0.01 |
| AIIMS index | 18.2 (2.9–114.4) | < 0.01 |

OR, odds ratio; CI, confidence interval; CMV, cytomegalovirus; AIIMS, All India Institute of Medical Sciences.
