

Supplementary Table 3. Odds Ratios for Clinical Remission Estimated by Logistic Regression^a Adjusted by Covariables in Maintenance Study (East-Asian Population)

Stratification variable	OR estimate	Lower 95% CL for OR	Upper 95% CL for OR
Status of clinical remission at the maintenance baseline	6.938	1.941	24.798
Oral corticosteroid use (yes or no) at the maintenance baseline	1.713	0.560	5.238
Induction treatment (Placebo IV to UST 6 mg/kg IV vs. UST 6 mg/kg IV)	0.587	0.160	2.147
Induction treatment (UST 130 mg IV vs. UST 6 mg/kg IV)	0.561	0.164	1.915

^aA logistic regression analysis model including fixed effect terms for treatment of maintenance phase and each stratification variable. CL, confidence limit; OR, odds ratio; IV, intravenous; UST, ustekinumab.
