

**Supplementary Fig. 7.** Proportion of Japanese patients who achieved endoscopic response in induction studies A and B at week 10 (A, B), and in the maintenance study at week 58 (C). Error bars indicate 95% confidence intervals (CIs). CIs for 0-responder treatment arms are not presented. 95% CIs were calculated based on normal approximation with a continuity correction. Endoscopic response was defined as an MES of 0 or 1. MES, Mayo endoscopic subscore.
