

**Supplementary Table 1.** Summary of expert opinions from the second round of the Delphi survey

Expert	Opinion
Expert E	<p><b><i>Comments on the intervention provider of the OFRE:</i></b> <i>It is also necessary to provide training on interventions to facility staff so that the oral function rehabilitation exercise system can be activated. This should be accompanied by the development of training systems for facility staff and training of dental personnel to train and manage them.</i></p>
Expert F	<p><b><i>Comments on the intervention provider of the OFRE:</i></b> <i>I agree that interventions should be provided by dental professionals. In addition, it is necessary to ensure that oral function rehabilitation exercises can be performed by anyone providing care in the community after receiving systematic training in the intervention.</i></p>
Expert G	<p><b><i>Comments on the intervention provider of the OFRE:</i></b> <i>If masticatory function exercises are to be provided, it is considered appropriate that they be performed by a dental hygienist who has received systematic training in the intervention.</i></p>
