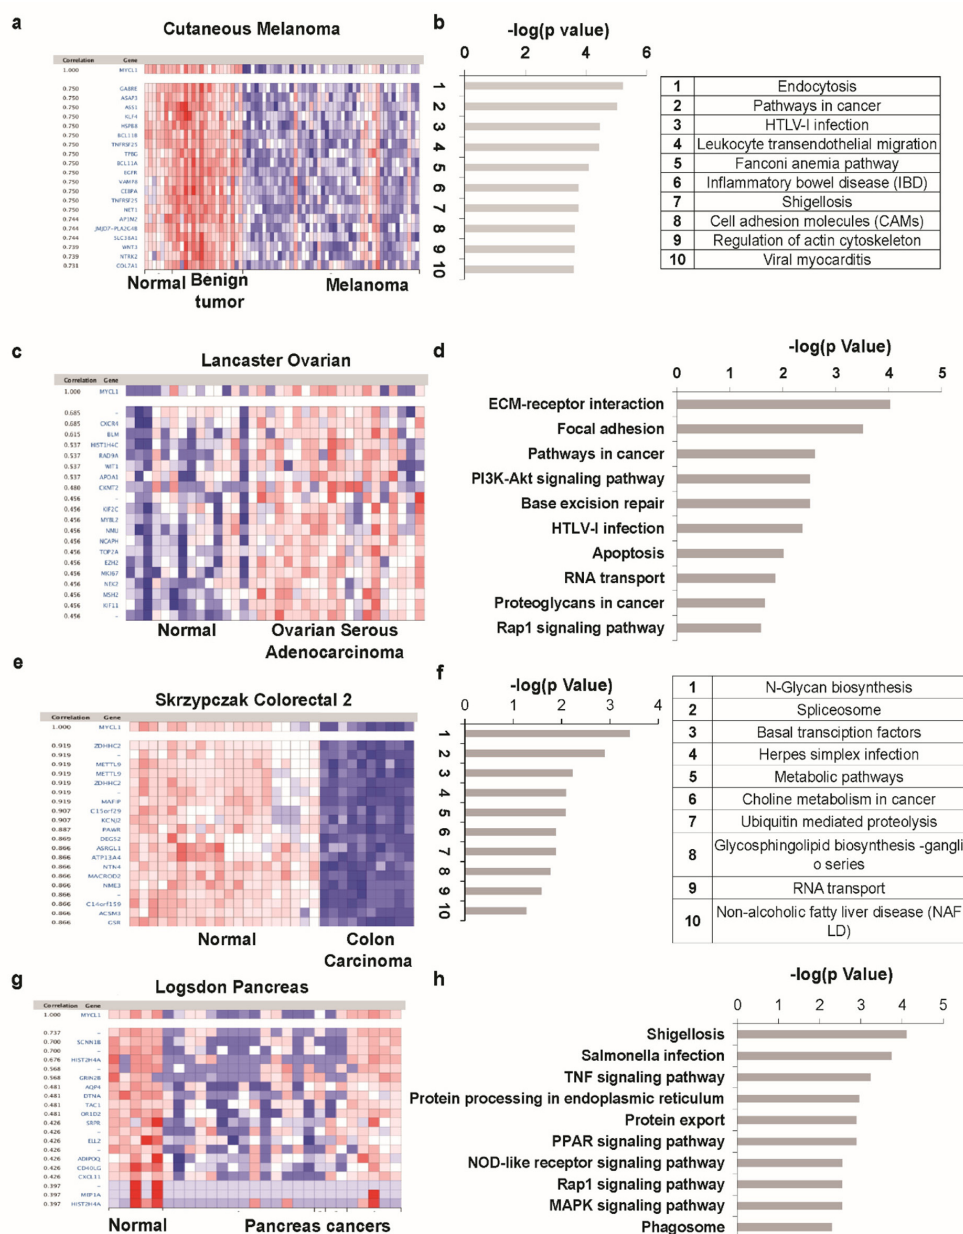

Fig. S2. Distribution of co-expression profiles and top gene ontology (GO) processes for MYCL in various cancer types. (a) MYCL was co-expressed with the indicated genes across a panel of 45 melanoma and normal skin tissues. (b) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in melanoma. (c) MYCL was co-expressed with the indicated genes across a panel of 31 ovarian serous adenocarcinoma and 3 normal ovarian tissues. (d) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in ovarian cancer. (e) MYCL was co-expressed with the indicated genes across a panel of 10 colon carcinoma and 20 normal colorectal tissues. (f) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in colon carcinoma. (g) MYCL was co-expressed with the indicated genes across a panel of 45 pancreatic cancers and 7 normal pancreas tissues. (h) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in pancreas cancers. The co-expression profiles of MYCL were retrieved from cBioPortal web. Bar length represents the significance and negative logarithm of enrichment p-value.

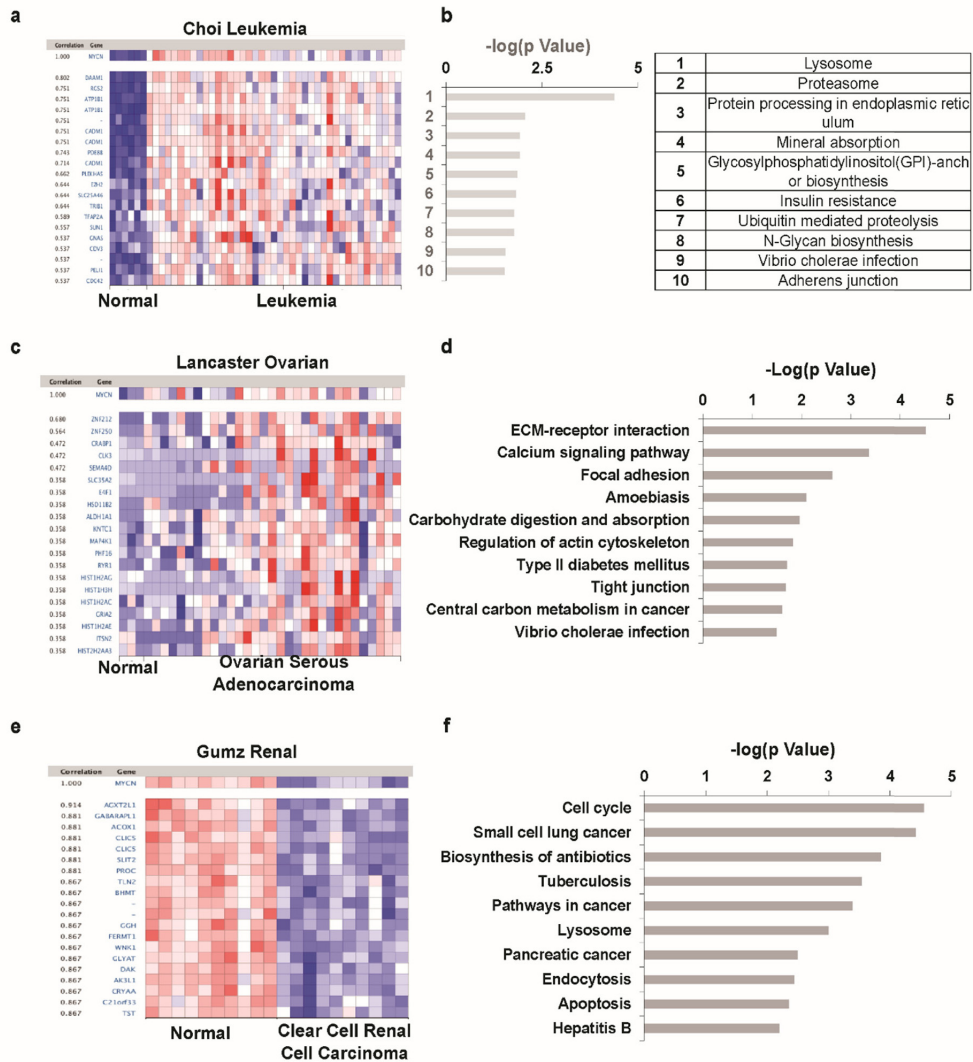

Fig. S3. Distribution of co-expression profiles and top gene ontology (GO) processes for MYCN in various cancer types. (a) MYCN was co-expressed with the indicated genes across a panel of 41 leukemia and 6 normal white blood cells. (b) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in blood cancer. (c) MYCN was co-expressed with the indicated genes across a panel of 31 ovarian serous adenocarcinoma and 3 normal ovarian tissues. (d) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in ovarian cancer. (e) MYCN was co-expressed with the indicated genes across a panel of 10 Clear cell renal cell carcinoma and 10 normal renal tissues. (f) Top significant GO processes were visualized by DAVID functional annotation web according to the co-expression profiles of 3,000 genes in kidney cancer. The co-expression profiles of C-MYC were retrieved from cBioPortal web. Bar length represents the significance and negative logarithm of enrichment p-value.

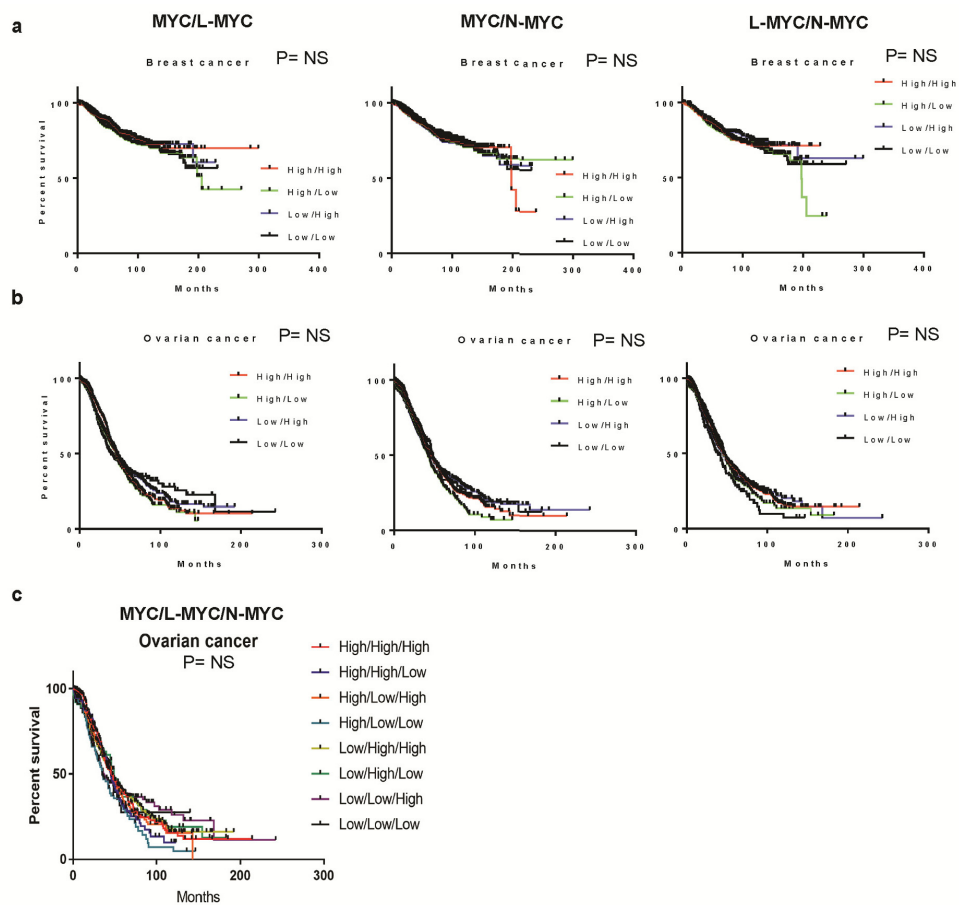

Fig. S4. The relationship between MYC family genes co-occurrence and Clinical outcomes in various types of cancer. Multivariate survival analysis of MYC/MYCL, MYC/MYCN, and MYCL/MYCN was performed using data from Kaplan-Meier Plotter in breast (a) and ovarian (b) cancers. Multivariate survival analysis of MYC/MYCL/MYCN was performed using data from Kaplan-Meier Plotter in ovarian cancer (c). All the survival curves were drawn using Graph pad prism 7 software. The p-value=NS: non-significance.
