

Supplementary Table 3. Risk factor analysis for HCC recurrence in the HIRA cohort: patients who received first HCC treatment after January 2015

	No recurrence (n=168)	Recurrence (n=31)	Univariate analysis		
			HR	95% CI	P-value
Age, years	69.2±9.3	69.3±9.1	1.009	0.971-1.049	0.641
Male gender	89 (53.0)	18 (58.1)	1.329	0.651-2.715	0.434
Diabetes mellitus	74 (44.0)	11 (35.5)	0.81	0.387-1.694	0.575
Liver cirrhosis	124 (73.8)	24 (77.4)	1.165	1.501-2.705	0.724
First HCC treatment					
RFA (vs. surgical resection)	166 (98.8)	30 (96.8)	0.564	0.077-4.143	0.573

Values are presented as number (%) or mean±standard deviation.

HR, hazard ratio; CI, confidence interval; HCC, hepatocellular carcinoma; HIRA, Health Insurance Review and Assessment; RFA, radiofrequency ablation.
