

Supplementary Figure 1. Assessment of lipid profiles according to clinical diagnosis. Lipid profiles were compared based on the clinical diagnosis of patients. The error bars indicate mean \pm standard deviation. MPA: microscopic polyangiitis, GPA: granulomatosis with polyangiitis, EGPA: eosinophilic granulomatosis with polyangiitis, HDL: high-density lipoprotein, LDL: low-density lipoprotein.

Supplementary Figure 2. Assessment of lipid profiles according to ANCA serostatus. The lipid profiles were compared based on the type of ANCA detected. The error bars indicate mean \pm standard deviation. ANCA: anti-neutrophil cytoplasmic antibody, MPO: myeloperoxidase, PR3: proteinase 3, HDL: high-density lipoprotein, LDL: Low-density lipoprotein.
