

Supplementary Table 1. Univariable Cox hazards model analysis of MHR at diagnosis for AAV poor outcomes in patients with AAV

Variable	AAV poor outcome	Univariable		
		HR	95% CI	p-value
MHR	All-cause mortality	1.014	0.783, 1.312	0.918
	CVA	1.246	1.096, 1.417	0.001
	ACS	1.017	0.778, 1.328	0.903

MHR: monocyte-to-high-density lipoprotein-cholesterol ratio, AAV: antineutrophil cytoplasmic antibody-associated vasculitis, HR: hazard ratio, CI: confidence interval, CVA: cerebrovascular accident, ACS: acute coronary syndrome.
