

Table S2. Therapeutic response rate in the wrist, elbow, and finger flexor muscles at 4, 8, and 12 weeks after injection in the per-protocol set

| | Time | Number of patients | Therapeutic response rate |
|---------------|-------------|---------------------------|----------------------------------|
| Wrist flexor | 4 weeks | 151 | 127 (84.1) |
| | 8 weeks | 151 | 127 (84.1) |
| | 12 weeks | 151 | 118 (78.1) |
| Elbow flexor | 4 weeks | 151 | 113 (74.8) |
| | 8 weeks | 151 | 106 (70.2) |
| | 12 weeks | 151 | 100 (66.2) |
| Finger flexor | 4 weeks | 151 | 132 (87.4) |
| | 8 weeks | 151 | 125 (82.8) |
| | 12 weeks | 151 | 111 (73.5) |

Values are presented as number (%).

Therapeutic response was defined as a decrease in the Modified Ashworth Scale score compared with baseline. PPS, per-protocol set.
