Supplementary Table 1. Cutoff value, sensitivity, specificity, and AUC of the 2h-FFA for predicting large-for-gestational-age newborns

	Cut-off level, μEq/L	Sensitivity, %	Specificity, %	AUC (95% CI)
2h-FFA	343.5	66.1	59.0	0.618 (0.546–0.690)

AUC, area under the curve; 2h-FFA, 2-hour postprandial free fatty acid; CI, confidence interval.
