NAFLD, nonalcoholic fatty liver disease; HSI, hepatic steatosis index; BMI, body mass index; WC, waist circumference; SBP, systolic blood pressure; DBP, diastolic blood pressure; FPG, fasting plasma glucose; HbA1c, glycosylated hemoglobin; KITT, rate constant for plasma glucose disappearance; HDL-C, high-density lipoprotein cholesterol; LDL-C, low-density lipoprotein cholesterol; AST, aspartate aminotransferase; ALT, alanine aminotransferase; eGFR, estimated glomerular filtration rate; Hs-CRP, high-sensitivity C-reactive protein; ARB, angiotensin II receptor blockers; ACE, angiotensin converting enzyme; CKD, chronic kidney disease.

^aIndicates P<0.05 compared with NAFLD (-), ^bIndicates P<0.05 compared with hepatic steatosis without advanced liver fibrosis, ^cStatistically significant.
