

Supplementary Table 2. HR and 95% CI for dementia incidence by quartiles of fasting glucose variability were assessed by standard deviation, coefficient of variation, and average real variability

Variable	All-cause dementia			Alzheimer's disease			Vascular dementia		
	No. of events	Incidence rate, /1,000 person-yr	Multivariate adjusted HR (95% CI)	No. of events	Incidence rate, /1,000 person-yr	Multivariate adjusted HR (95% CI)	No. of events	Incidence rate, /1,000 person-yr	Multivariate adjusted HR (95% CI)

Adjusted for age, sex, body mass index, alcohol consumption, smoking, regular exercise, presence of hypertension, dyslipidemia, chronic kidney disease, lower 20% income, hemoglobin level, duration of diabetes for at least five years, prescription number of glucose-lowering medications, prescription history of insulin, mean fasting glucose, and presence of depressive disorder.

HR, hazard ratio; CI, confidence interval; FG, fasting glucose; SD, standard deviation; CV, coefficient of variation; ARV, average real variability.
