

**Supplementary Fig. 1.** Blood glucose levels and body weight before ischemia-reperfusion (IR) injury are unaltered by long-term dichloroacetate (DCA) treatment in streptozotocin (STZ)-induced diabetic mice. Blood glucose level (A) and body weight (B) were measured on 1 day before IR injury. Data are the mean  $\pm$  standard error of the mean. <sup>a</sup> $P < 0.01$  vs. Control.
