

Supplementary Fig. 4. Expression levels of markers associated with the differentiation potential in brown adipose tissue-resident adipose stem/progenitor cells. (A-D) Representative immunofluorescence images of (A) growth differentiation factor 10 (GDF10), (B) odd-skipped related transcription factor 1 (OSR1), (C) ERBB receptor feedback inhibitor 1 (ERRF1), and (D) collagen type I alpha 1 chain (COL1A1) protein expression in normal rats (NC) and type 2 diabetes mellitus (T2DM) rats (left panel) and their quantitative comparison (right panel). A two-tailed Student's *t*-test was used for statistical analysis. DAPI, 4',6-diamidino-2-phenylindole. ^a*P*<0.01, ^b*P*<0.001.
