

**Supplemental Table S2.** Top 10 Principal Diagnoses of Readmissions for Hyperthyroidism Hospitalizations

| Principal readmission diagnosis ( <i>n</i> =716)     | Proportion, % |
|--|---------------|
| Hyperthyroidism                                      | 21.7          |
| Paroxysmal atrial fibrillation                       | 6.6           |
| Sepsis, unspecified organism                         | 6.2           |
| Hypertensive heart disease with heart failure        | 3.7           |
| Acute kidney failure, unspecified                    | 2.4           |
| Acute on chronic systolic (congestive) heart failure | 2.1           |
| Urinary tract infection, unspecified site            | 1.9           |
| Acute respiratory failure with hypoxia               | 1.6           |
| Hypertensive heart and CKD with heart failure        | 1.0           |
| Sepsis due to <i>Escherichia coli</i>                | 0.9           |

CKD, chronic kidney disease.
