

**Supplemental Fig. S2.** (A) Scatter plot between plasma aldosterone concentration (PAC) measured by radioimmunoassay (RIA) and PACs measured by liquid chromatography-tandem mass spectrometry (LC-MS/MS), and linear regression line. (B) Bland-Altman plot of the difference (PAC measured by RIA-PAC measured by LC-MS/MS) against the mean of the PACs measured by the two assays (full line, mean of the difference; dotted lines, 95% upper and lower bounds of the difference). PA, primary aldosteronism.
