Supplemental Fig. S2. Forest plots with hazard ratios (HRs) and 95% confidence interval for covariates from multivariable Cox regression models M1 to M10 are presented: (orange) the low–homeostasis model assessment of insulin resistance (HOMA-IR)/low–homeostasis model assessment of β-cell function (HOMA-β) group, the high–HOMA-IR/high–HOMA-β group, and the high–HOMA-IR/low–HOMA-β group with the low–HOMA-IR/high–HOMA-β group as the reference level; (green) age, sex with male as reference level, systolic blood pressure, total cholesterol, and body mass index (BMI).
