Supplementary Fig. 2. Normal inferior vena cava, external and internal iliac veins, left renal vein, and left common iliac vein on B-mode and color Doppler ultrasound.

A. Color Doppler transabdominal ultrasound image shows the inferior vena cava (white arrow) with antegrade flow. B. Color Doppler transabdominal ultrasound image shows the external iliac vein (white arrow) and internal iliac vein (asterisk), both demonstrating antegrade flow. C. Color Doppler transabdominal ultrasound image shows the left renal vein (white arrow), without evidence of compression between the aorta (asterisk) and superior mesenteric artery (black arrow). D. B-mode transabdominal ultrasound image shows no evidence of compression of the left common iliac vein (asterisk) by the overlying right common iliac artery (white arrow).
