

A B

Supplementary Fig. 5. **Extrinsic compression of the left common iliac vein.**
A. Coronal multiplanar reconstruction from contrast-enhanced abdominal computed tomography (CT) using maximum intensity projection (MIP) demonstrates extrinsic compression of the left common iliac vein (white arrow) by the overlying right common iliac artery (black arrow). B. Axial CT venography image demonstrates marked narrowing of the left common iliac vein (white arrow) due to extrinsic compression by the overlying right common iliac artery (black arrow).
